EXECUTIVE PRESENTATION • DEPARTMENTAL BLUEPRINT

AUTONOMOUS DEPARTMENT • STRATEGIC ENTERPRISE FUNCTION

Enterprise ERP & Analytics Strategic Roadmap

Establishing ERP as an Independent Department: Dynamics 365 F&O Backbone, Enterprise Data Engineering, Analytics & Statutory Compliance

AUTONOMOUS MANDATE

Independent ERP & Enterprise Data Department

Unified governance of Core F&O, Big Data Pipelines, Executive BI & Statutory Compliance under dedicated departmental leadership.

INDEPENDENT DEPARTMENT | D365 F&O BACKBONE | DATA ENGINEERING & LAKEHOUSE | FINANCE & COMPLIANCE

STRATEGIC DEPARTMENT OBJECTIVE

De-Risk Operations & Unify the Data Stack

Treating ERP as an autonomous strategic function prevents compliance dilution and conflicting priorities. Orchestrating 16 enterprise initiatives across Microsoft Dynamics 365, Azure Synapse, Global Banking H2H, and AI Automation to cut cloud costs and ensure audit compliance.

EXPANSIVE OPERATIONAL SCOPE

End-to-End Enterprise Nervous System

ERP covers a vast cross-functional footprint: **Statutory Accounting & Audit**, **Enterprise Data Engineering (100M+ Synapse records)**, **Power BI Semantic Models**, and **FinOps (₹55–65L annual cloud savings delivered)**.

CORE STRATEGIC DOCTRINE

“ERP is the enterprise operational nervous system. Spanning Finance & Compliance, Big Data Engineering, and Executive BI, it must be governed as an autonomous, independent department — never merged or diluted across generic IT or BI.”

ORGANIZATIONAL GOVERNANCE • STRUCTURAL ALIGNMENT

STRATEGIC IMPERATIVE: AUTONOMOUS FUNCTION

Why ERP Must NOT Be Merged: The Independent Department Mandate

Attempting to merge ERP into Generic IT, General BI, or Accounting Operations dilutes compliance, creates fatal blind spots, and compromises financial data integrity.

WHY MERGING WITH GENERIC IT FAILS

Ticket Queue Mentality & Zero Accounting DNA

IT views ERP as mere software licenses and support tickets. IT lacks accounting intuition, ledger balancing, statutory tax laws (GST/TDS/E-Invoicing), and compliance audit standards. Critical financial enhancements get stalled in generic queues, risking statutory penalties, failed audits, and month-end closing chaos.

WHY MERGING WITH GENERAL BI FAILS

Surface Dashboards Without Ledger Balancing

General BI excels at front-end visual widgets and sales metrics. However, they lack understanding of double-entry bookkeeping, posting profiles, sub-ledger to GL reconciliations, and transactional writebacks. Dashboards built without ERP accounting controls report inaccurate figures that fail board and auditor scrutiny.

WHY SUB-MERGING UNDER ACCOUNTING FAILS

Lacks Cloud Architecture & Data Engineering

Finance teams understand accounting ledgers, but lack the technical depth for cloud big-data engineering (Synapse, Spark pools, delta tables, API webhooks, CI/CD pipelines, and cloud FinOps). Treating ERP as an accounting end-user tool leaves critical cloud systems, data pipelines, and costs unmanaged.

THE INDEPENDENT ERP DEPARTMENT

Unified Full-Stack Ownership & C-Suite Agility

ERP operates as an autonomous, standalone department bridging **Finance & Statutory Compliance + 100M+ Synapse Data Engineering + Executive BI Reporting** under single accountable leadership — reporting directly to executive leadership (CFO / CIO).

Executive Verdict: ERP Scope is Too Expansive & High-Stakes to Merge

ERP is neither generic IT maintenance nor cosmetic BI visualization. It governs statutory compliance, corporate treasury, multi-million dollar cloud infrastructure, and the core general ledger. Establishing ERP as an **Independent Department & Autonomous Function** guarantees compliance defense, unifies data pipelines, and delivers verified numbers to executive leadership.

DEPARTMENTAL ARCHITECTURE • FULL-STACK SCOPE

UNIFIED OPERATIONAL CONTINUUM

The 3 Core Domains of the Independent ERP Department

ERP covers a massive enterprise scope spanning Finance Operations & Statutory Compliance, Big Data Engineering, and Executive BI Reporting under unified governance.

1. Finance Operations & Compliance

STATUTORY CORE

The transactional & regulatory backbone centered around Microsoft Dynamics 365 F&O:

- **Core Accounting:** GL, AP, AR, Fixed Assets, Cost Accounting, Multi-currency revaluation & Month-End closing.
- **Statutory & Tax Compliance:** GST, TDS, E-Invoicing, RBI banking norms, and internal/statutory audit defense.
- **Treasury & Bank Automation:** JP Morgan Host-to-Host STP, ICICI payment gateways, and automated bank reconciliation.
- **Internal Controls & SoD:** Strict Segregation of Duties (View-only Trial Balance, restricted currency settlement).

2. Enterprise Data Engineering

BIG DATA ENGINE

High-throughput cloud data architecture bridging ERP transactions to enterprise lakehouses:

- **Azure Synapse & Lakehouse:** ADLS Gen2, Apache Spark pools, Delta Lake tables, and partition management.
- **100M+ Records Processed:** Scalable ETL/ELT orchestration handling massive transaction volumes with zero data loss.
- **Integration Middleware:** REST API webhooks (Razorpay/Cashfree), DMF staging, and Azure DevOps CI/CD pipelines.
- **Cloud FinOps Governance:** Proactive Spark tuning and VM governance delivering **₹55–65 Lacs/year recurring savings**.

3. Analytics & Executive BI

DECISION INTELLIGENCE

Executive decision intelligence directly reconciled with general ledger transactions:

- **Power BI Semantic Models:** DirectLake & Import mode models aligned to GL posting profiles for 100% data integrity.
- **Financial Intelligence:** Automated P&L, balance sheet, working capital, and real-time cashflow forecasting models.
- **Self-Service Empowerment:** Curated enterprise data marts serving 100+ finance and business executives.
- **Automated Reconciliations:** Systemic cross-checks between ERP ledgers, bank statements, and BI dashboards.

STRATEGIC ARCHITECTURE • 16 INITIATIVES

COMPREHENSIVE ERP BLUEPRINT

The 4 Strategic ERP Roadmap Pillars

Structuring 16 high-impact deliverables into enterprise pillars delivering hard-dollar ROI, efficiency, and governance.

PILLAR 01

System Health & Cost Control

Modernizing developer environments, meeting Microsoft PPAC mandates, and multi-phase data archival.

4 Key Deliverables:

- CHE to UDE Migration
- LCS to PPAC Movement
- Data Archival (Phase 1)
- Data Archival (Phase 2)

VALUE: DIRECT CLOUD SPEND REDUCTION

PILLAR 02

Process Efficiency & Treasury

Straight-through global bank processing, real-time FX exposure intelligence, and dispute acceleration workflows.

3 Key Deliverables:

- JP Morgan Host-to-Host (H2H)
- Real-time Forex Exposure Engine
- Automated Dispute Framework

VALUE: AUTOMATED BANK RECONCILIATION

PILLAR 03

AI & Digital Payments

AI Builder OCR for touchless AP invoice entry, TBO Pay API checkouts, and zero-touch vendor payment runs.

4 Key Deliverables:

- Invoice Capture (OCR / AI)
- TBO Pay Gateway Integration
- Vendor Payment Automation
- Bank Master Bulk Onboarding

VALUE: 200+ AP HOURS REALLOCATED

PILLAR 04

Risk, Governance & Controls

Automated CI/CD deployments, Segregation of Duties on Trial Balance, multi-currency restrictions & batch fault tolerance.

5 Key Deliverables:

- Azure DevOps CI/CD Pipelines
- SoD Roles (Trial Balance)
- Currency Allocation Restrictions
- Allocation Reversal / Error Resiliency
- GL & Master Data Audit Scripts

VALUE: SOX COMPLIANCE & ZERO OUTAGES

PILLAR 01 DEEP-DIVE • 4 DELIVERABLES

DIRECT AZURE INFRASTRUCTURE SAVINGS

Pillar 1: System Health & Cloud Cost Optimization

Cutting developer cloud compute bills, avoiding $30–$40/GB Dataverse storage fees, and future-proofing ERP administration.

1. Replacing CHE with UDE (Unified Dev Env)

HIGH EFFORT • 4–6 WKS

Business Impact: Modernizes developer experience with local VS 2022; eliminates rented cloud virtual machines.

💰 ROI: Eliminates 100% of monthly Azure VM compute charges for all active developers.

Business Context: Instead of paying hourly cloud rent for remote developer VMs, developers code directly on their local machines, immediately halting recurring Azure compute billing.

2. Power Platform Movement (LCS to PPAC)

HIGH EFFORT • 8–12 WKS

Business Impact: Mandatory Microsoft architectural migration merging F&O into the unified Dataverse ecosystem.

💰 ROI: Avoids legacy LCS support overhead and aligns with Microsoft's official long-term ERP roadmap.

Business Context: Microsoft is sunsetting the legacy LCS portal. We are moving our entire ERP control center to PPAC to maintain full enterprise support.

3. Data Archival (Phase 1 – Standard F&O)

MED-HIGH • 4–6 WKS

Business Impact: Shrinks active database footprint by archiving historical core accounting and GL transactions.

💰 ROI: Halts massive Microsoft Dataverse overage penalties ($30–$40 per additional GB/month).

Business Context: Moving multi-year-old financial transaction records into low-cost cold storage so live ERP queries remain blazing fast and storage invoices drop drastically.

4. Data Archival (Phase 2 – Custom & DMF Staging)

HIGH EFFORT • 8–12 WKS

Business Impact: Archives bespoke custom tables and clears out bloated DMF staging execution data.

💰 ROI: Guarantees peak database query speeds and drastically reduces backup/upgrade maintenance windows.

Business Context: Expanding storage optimization by writing custom rules to clear out bespoke company tables and temporary batch staging files.

PILLAR 02 DEEP-DIVE • 3 DELIVERABLES

CASH FLOW & GLOBAL TREASURY INTEGRATION

Pillar 2: Process Efficiency & Treasury Automation

Direct API-level bank integration, real-time currency exposure analytics, and accelerated dispute resolution.

5. Host-to-Host Bank Integration (JP Morgan)

HIGH EFFORT • 10–14 WKS

Business Impact: Enables automated Straight-Through Processing (STP) for global vendor payments and instant e-statements.

💰 ROI: Drastically reduces bank fees, eliminates manual bank file uploads, cuts fraud risk.

Business Context: Direct server-to-server connection with JP Morgan. Payments execute and bank statements reconcile automatically without anyone manually uploading CSVs.

6. Real-Time Forex Report Engine

MED-HIGH • 4–6 WKS

Business Impact: Provides instant C-suite visibility into currency exposure, accounting vs. transaction currencies, and gains/losses.

💰 ROI: Replaces days of manual Excel reconciliation, avoids audit penalties, protects margins.

Business Context: An automated analytical dashboard calculating exactly how much the company makes or loses across multi-currency operations due to exchange rate swings.

7. Dispute Tracker & Workflow Automation

MED EFFORT • 6–8 WKS

Business Impact: Accelerates resolution of vendor & customer invoice discrepancies through automated approval routing.

💰 ROI: Recovers trapped receivables faster, eliminates vendor late-payment interest fees.

Business Context: An automated internal ticketing workflow inside ERP. Disputed bills route automatically to responsible managers instead of stalling in email chains.

TREASURY IMPACT HIGHLIGHT

Straight-Through Processing Transforms Financial Velocity

75% FASTER PAYMENT CYCLES

Connecting JP Morgan directly to D365 F&O slashes payment cycle times by 75% and eliminates human error during high-volume disbursements.

PILLAR 03 DEEP-DIVE • 4 DELIVERABLES

TOUCHLESS ACCOUNTS PAYABLE & GATEWAY SCALE

Pillar 3: AI Innovation & Digital Payments

Deploying AI OCR Builder for automated AP entry, integrating TBO Pay checkout APIs, and zero-touch payment proposal runs.

8. Invoice Capture (AI Builder OCR for SG&A)

HIGH EFFORT • 12–16 WKS

Business Impact: Employs Microsoft AI Builder and OCR to ingest, extract, and match supplier PDF invoices directly into D365.

💰 ROI: Direct reduction in AP manual data entry headcount; eliminates paper delays.

Business Context: Cognitive AI reads incoming supplier PDF invoices, extracts key fields, and enters them into ERP automatically—zero manual re-keying.

9. TBO Pay Related Core Development

HIGH EFFORT • 10–14 WKS

Business Impact: Seamless API integration with specialized payment gateways to support instant booking checkouts and ledger postings.

💰 ROI: Prevents revenue leakage, reduces checkout cart dropouts, and guarantees automated settlement.

Business Context: Wiring digital payment processors into ERP so customer checkouts are instant, secure, and automatically recorded in the ledger without delay.

10. Vendor Payment Proposal Automation

MED EFFORT • 6–8 WKS

Business Impact: Zero-touch payment proposal algorithms analyzing due dates, cash balances, and early settlement discount terms.

💰 ROI: Captures 100% of vendor cash discounts and saves 15+ hours weekly in AP proposal generation.

Business Context: Setting up smart rules so ERP automatically drafts the list of bills to pay each week based on cash rules, saving AP from searching thousands of invoices.

11. Bank Master CSV Bulk Implementation

LOW–MED • 3–4 WKS

Business Impact: Standardized bulk import templates for agency, supplier, and airline bank details with rigorous checksum validation.

💰 ROI: Stops costly payment bounces, prevents fraud, and accelerates supplier onboarding by days.

Business Context: A standardized bulk template allowing the company to import thousands of verified vendor bank details in seconds, eliminating typos that cause bounced payments.

PILLAR 04 DEEP-DIVE • 5 DELIVERABLES

AUDIT PROOFING & INFRASTRUCTURE SAFETY

Pillar 4: Risk, Governance & Financial Controls

Eliminating deployment crashes via CI/CD, locking down Trial Balance SoD, and safeguarding multi-currency settlements.

12. CI/CD DevOps Pipeline Creation

HIGH EFFORT • 4–6 WKS

Business Impact: Automated build, code analysis, testing, and deployment pipelines via Azure DevOps for all F&O customizations.

💰 ROI: Prevents disastrous production downtime, bugs, and emergency rollbacks.

Business Context: A digital quality-control assembly line that automatically tests code before it touches production, preventing developer mistakes from crashing the ERP.

13. Roles Validation (Trial Balance)

LOW–MED • 3–4 WKS

Business Impact: Enforces strict Segregation of Duties (SoD) by ensuring reporting users have View-Only access to financial statements.

💰 ROI: Mitigates financial fraud risks; guarantees 100% statutory and SOX audit compliance.

Business Context: Locking vault doors: ensuring staff who only need to review financial reports cannot accidentally or intentionally alter ledger figures.

14. Multi-Currency Allocation Restrictions

MED EFFORT • 4–6 WKS

Business Impact: Hard system blocks preventing users from settling invoices and payments in mismatched currencies without realized FX entries.

💰 ROI: Eliminates expensive technical database cleanups and ledger reconciliation crises.

Business Context: Guardrails stopping staff from mistakenly settling a EUR invoice with USD without proper exchange rate calculations that throw accounting out of balance.

15. Allocation Reversal & Batch Exception Handling

MED–HIGH • 8–10 WKS

Business Impact: Safe un-settlement algorithms and isolated row-level error handling for overnight batch processing.

💰 ROI: Reversible allocations without IT emergency scripts; prevents batch job crashes when encountering a single invalid record.

Business Context: An "undo" function for wrong payment applications, plus safety nets so if one payment has an error, the batch skips it and finishes the remaining 9,999 transactions smoothly.

16. Activity & GL Master Data Validation

LOW EFFORT • 2–3 WKS

Business Impact: Automated validation scripts ensuring General Ledger master codes and vendor records remain uncorrupted.

💰 ROI: Completely avoids statutory audit fines and eliminates reporting reconciliation delays.

Business Context: Automated digital watchdogs continually checking that master financial accounts and vendor lists follow company rules and remain uncorrupted.

OPERATIONAL DETAIL • 16 ENTERPRISE DELIVERABLES

FULL MASTER INVENTORY

Master ERP Deliverables & Scope Matrix

Complete technical specification of all 16 deliverables including durations, effort tiers, business impacts, and Enterprise ROI delivery.

#	PILLAR / CATEGORY	DELIVERABLE & SCOPE	DURATION	EFFORT	BUSINESS IMPACT	COST SAVING & ENTERPRISE ROI DELIVERY
01	SYSTEM HEALTH	**Replacing CHE with UDE** Unified Dev Environments	4–6 Wks	HIGH	Modernizes developer workflow via VS 2022; moves dev to local hardware.	High: Eliminates monthly Azure VM compute costs across developer fleet.
02	SYSTEM HEALTH	**Power Platform Movement (LCS → PPAC)** Mandatory MSFT Architecture	8–12 Wks	HIGH	Merges Dynamics F&O into the unified Dataverse ecosystem under Power Platform.	High: Eliminates legacy LCS overhead; meets Microsoft support mandate.
03	SYSTEM HEALTH	**Data Archival (Phase 1 – Standard)** Core Accounting Tables	4–6 Wks	MED–HIGH	Shrinks active database footprint by safely archiving aged financial records.	High: Halts Dataverse storage overage penalty charges ($30–$40/GB/month).
04	SYSTEM HEALTH	**Data Archival (Phase 2 – Custom)** Custom & DMF Staging Data	8–12 Wks	HIGH	Archives bespoke company tables and cleans temporary DMF staging artifacts.	High: Deepens storage cost avoidance; maximizes query performance & speed.
05	PROCESS EFFICIENCY	**Host-to-host Bank Integration (JP Morgan)** Direct ISO20022 STP	10–14 Wks	HIGH	Straight-through processing for global payments & automated e-statement reconciliation.	High: Lowers bank fees, removes manual uploads, saves significant AP hours.
06	PROCESS EFFICIENCY	**Forex Report Implementation** Multi-Currency Exposure Engine	4–6 Wks	MED–HIGH	Real-time visibility into currency exposure, realized & unrealized FX gains/losses.	Medium: Eliminates multi-day Excel reconciliations, protects trading margins.
07	PROCESS EFFICIENCY	**Dispute Tracker & Framework Automation** Automated Dispute Resolution	6–8 Wks	MEDIUM	Accelerates resolution of vendor & customer billing discrepancies via smart routing.	Medium: Prevents delayed receivables and avoids late-payment vendor penalties.
08	NEW DEV / AUTO	**Invoice Capture (SG&A Invoices)** Microsoft AI Builder & OCR	12–16 Wks	HIGH	Touchless AP entry using AI to read, extract, and match supplier PDF invoices.	High: Direct AP FTE headcount efficiency; ends paper entry bottlenecks.
09	NEW DEV / AUTO	**TBO Pay Related Development** Payment Gateway API Integration	10–14 Wks	HIGH	Seamless API checkout integrations for fast booking and instant GL settlement.	High: Reduces checkout friction and prevents revenue leakage across gateways.
10	NEW DEV / AUTO	**Vendor Payment Proposal Automation** Zero-Touch Payment Scheduling	6–8 Wks	MEDIUM	Automated payment run algorithms triggered by due dates and cash positions.	Medium: Captures 100% of vendor early-payment discounts and cuts AP cycle time.
11	NEW DEV / AUTO	**Bank Master CSV Implementation** Bulk Master Data Onboarding	3–4 Wks	LOW–MED	Standardizes agency, supplier, and airline bank details onboarding via bulk CSV.	Medium: Drastically cuts Master Data MDM overhead; prevents misdirected funds.
12	RISK & CONTROL	**Pipeline Creation (CI/CD)** Azure DevOps Automated Deploy	4–6 Wks	HIGH	Automates testing, approval gates, and zero-downtime releases via Azure DevOps.	High: Prevents production downtime, crashes, and costly rollback interventions.
13	RISK & CONTROL	**Roles Validation (Trial Balance)** Segregation of Duties (SoD)	3–4 Wks	LOW–MED	Enforces View-Only reporting security and strict SoD across financial ledgers.	Medium: Mitigates financial fraud risks; ensures strict statutory and SOX compliance.
14	RISK & CONTROL	**Currency Allocation Restrictions** Mismatched Currency Blockers	4–6 Wks	MEDIUM	System blocks preventing settlement of mismatched currencies without FX rates.	Low–Med: Eliminates developer emergency data-fixes and complex audit restatements.
15	RISK & CONTROL	**Allocation Reversal & Exception Handling** Fault-Tolerant Batch Jobs	8–10 Wks	MED–HIGH	Automates payment un-settlement logic; isolates error rows in bulk processing.	Medium: Prevents entire batch crashes; cuts developer support tickets by 80%.
16	RISK & CONTROL	**Activity & Master Data Validation** Automated GL Integrity Scripts	2–3 Wks	LOW	Automated audit scripts verifying GL accounts and vendor records integrity.	Medium: Avoids audit penalties and ensures downstream reporting numbers match 100%.

TIMELINE • 3 STRATEGIC WAVES

EXECUTION PHASING (Q1 – Q4)

Phased Execution Roadmap & Milestones

Strategically sequenced to deliver immediate quick wins and cloud cost reductions, followed by deep platform transformation.

WAVE 01 • MONTHS 1–3

Quick Wins & Cost Cut

Immediate cloud expenditure reduction, safety rails & audit hygiene.

- **CHE → UDE Dev Migration** (Stop VM Costs)
- **Azure DevOps CI/CD Pipelines** (Deploy Safety)
- **Data Archival Phase 1** (Standard F&O Storage)
- **SoD Roles Trial Balance** (View-Only Audit)
- **Bank Master Bulk CSV** (Clean MDM)
- **GL & Master Audit Scripts** (Quick Win)

WAVE 02 • MONTHS 4–6

Architecture & Core Flow

Mandatory Microsoft migration, currency intelligence & custom data purge.

- **LCS → PPAC Movement** (Microsoft Mandate)
- **Data Archival Phase 2** (Custom & DMF Tables)
- **Forex Real-Time Report** (FX Gain/Loss Engine)
- **Dispute Tracker Framework** (Cash Recovery)
- **Vendor Payment Proposals** (Smart Scheduling)
- **Currency Allocation Blocks** (Ledger Guardrails)

WAVE 03 • MONTHS 7–10

Next-Gen Scale & AI

Direct banking STP, payment gateway checkouts & cognitive AI invoice entry.

- **JP Morgan Host-to-Host (H2H)** (Direct Bank STP)
- **Invoice Capture (AI OCR)** (Touchless AP)
- **TBO Pay Gateway Integration** (Checkout APIs)
- **Allocation Reversal & Batch Resiliency** (Zero-Crash Batches)

Risk Mitigation Governance: No high-risk external banking or payment integration is launched until CI/CD pipelines, allocation guardrails, and rollback frameworks are fully active.

DISCIPLINED PHASING

BUSINESS CASE • HARD DOLLAR ROI

EXECUTIVE FINANCIAL IMPACT

Quantified Enterprise Value & ROI Scorecard

Translating technical ERP milestones into hard currency savings, labor hours recovered, and audit de-risking.

INFRASTRUCTURE SAVINGS

$30–$40

Avoided per GB/month in Microsoft Dataverse overage penalties through 2-Phase Archival.

CLOUD COMPUTE CUT

100%

Elimination of hourly cloud compute costs for developer VMs via UDE local environment migration.

AP LABOR REALLOCATED

200+ Hrs

Saved monthly through AI OCR Invoice Capture, JP Morgan H2H, and auto payment runs.

AUDIT & DOWNTIME RISK

Zero

Tolerance for SoD violations, currency mismatch bugs, or unversioned manual code releases.

PROVEN FINOPS TRACK RECORD • HARD-DOLLAR CLOUD SAVINGS

100% ZERO ERP OPERATIONAL DISRUPTION

₹55–65 Lacs / Year Realized & Pipeline Cloud Cost Elimination

Direct compute and workload optimizations engineered by this position—slashing Azure Synapse run-rate by >50% and decommissioning idle running VMs.

PREVIOUS SYNAPSE SPEND

₹7.05L/mo

Historical 12-month spend was ₹9.1M (₹91 Lacs) cumulative prior to optimization.

PHASE 1: SPARK TUNING

₹4.5–5.0L/mo

Spark compute matched to workload; delivered ~₹10K/day savings (Sept cut to ₹6L).

PHASE 2: TARGET RUN RATE

₹3.0–3.5L/mo

Active in-progress optimization saving an extra ₹1.0–1.5L/mo (Net annual: **₹45–55L/yr**).

IDLE VMS DECOMMISSIONED

₹10.0L/yr

Audited & halted continuously running unutilized VMs, cutting recurring charges.

Combined Annual Cloud Bottom-Line Benefit: ₹45–55 Lacs (Synapse) + ₹10 Lacs (VMs) = **₹55.0 to ₹65.0 Lacs / Year** direct recurring EBITDA contribution!

VERIFIED FINOPS OUTPUT

Tangible Financial Gains

- **Early Settlement Discounts:** Automated vendor proposals capture supplier 1–2% early payment rebates.
- **Reduced Banking Fees:** JP Morgan H2H bulk transmission avoids retail portal per-transaction charges.
- **Protected Trading Margins:** Real-time Forex engine alerts treasury to currency swings before margins erode.

Intangible Enterprise Strategic Value

- **Scalability:** Systems handle 10× booking volume without requiring proportional AP headcount growth.
- **Audit Readiness:** Complete traceability from transaction checkout to GL journal entries.
- **Developer Morale & Speed:** Local VS 2022 debugging and CI/CD pipelines enable rapid release cycles.

CAREER & DEPARTMENTAL TRAJECTORY • ORGANIZATIONAL ARCHITECTURE

AUTONOMOUS DEPARTMENT ARCHITECTURE

Department Architecture & Leadership Trajectory

Establishing and leading the Independent ERP Department: Evolving from Senior Manager to Director.

CURRENT STATE • MONTHS 0–6

Technical Lead / Analytics Manager

Hands-on problem solver & foundational architect.

- Writes complex SQL, PySpark & Synapse pipelines
- Resolves stuck D365 staging records & posting locks
- Delivers 100+ stakeholder Power BI reports & models
- Executes initial Spark tuning & halts unutilized VMs

EXECUTION FOUNDATION

TARGET ELEVATION • MONTHS 6–18

Senior Manager – ERP & Enterprise Data

Autonomous Department Lead & Systems Architect.

- Formalizes ERP as an independent department
- Leads 3 sub-functions: F&O Compliance, Data Eng, BI
- Directs JP Morgan H2H, AI Invoicing & PPAC migration
- Locks in ₹55–65L annual cloud FinOps savings

RECOMMENDED ELEVATION

LONG-TERM VISION • MONTHS 18–36

Director – Enterprise Data & Systems

Enterprise strategist & C-Suite transformation partner.

- Shapes group-wide ERP, Microsoft Fabric & AI roadmap
- Strategic advisor to CFO, CIO & Executive Board
- Scales enterprise data architectures across business units
- Directs enterprise risk, regulatory governance & FinOps

STRATEGIC LEADERSHIP

INDEPENDENT ERP DEPARTMENT STRUCTURE (REPORTING DIRECTLY TO CFO / CIO)

AUTONOMOUS GOVERNANCE

Branch 1: ERP Finance & Compliance

D365 F&O Core, GL/AP/AR, Tax/GST/TDS, E-Invoicing, Bank H2H & Audit Defense

Branch 2: Data Engineering & Lakehouse

Azure Synapse, ADLS Gen2, Spark Pools, 100M+ Records, CI/CD & FinOps Governance

Branch 3: Analytics & Executive BI

Power BI Semantic Models, Financial Reconciliations, Executive P&L Cockpits

Why It Must Stand Independent: ERP sits at the high-stakes junction of financial statutory compliance and massive big data engineering. Separating it from generic IT ticket queues and general BI reporting guarantees speed, regulatory compliance, and uncompromised financial truth.

ORGANIZATIONAL CAPABILITY • GOVERNANCE MODEL

SUSTAINABLE OPERATING MODEL

Institutionalizing Capability: Building Systems, Not Bottlenecks

A mature leadership role transitions the company from individual operational dependency to automated systems, SOPs, and empowered teams.

1. STANDARDIZED DOCUMENTATION

Standard Operating Procedures (SOPs)

Documenting all D365 staging pipelines, Synapse external tables, and reconciliation queries in centralized wikis so junior engineers can resolve routine alerts independently.

2. AUTOMATED SELF-HEALING

Automated Audits & Alerts

Implementing Task 15 (Batch Exception Handling) and Task 16 (Master Data Validation) so systems alert the team before users notice issues, eliminating manual monitoring.

3. MENTORSHIP & DELEGATION

Cross-Skilling the Team

Mentoring business analysts to understand ERP table structures and training junior developers on CI/CD pipelines, freeing senior bandwidth for high-leverage architectural strategy.

The Strategic Leadership Credo:

"A truly great leadership function does not maintain dependency. It engineers automated systems, establishes transparent controls, and upskills team members so the enterprise operates predictably, securely, and scalably."

SUMMARY • STRATEGIC RECOMMENDATIONS

ACTION PLAN

Summary & Implementation Next Steps

Formalizing the roadmap, securing cross-functional alignment, and elevating the ERP & Analytics function.

CROWNING PROOF POINT • REALIZED FINANCIAL LEADERSHIP

DIRECT P&L IMPACT

Proven Track Record: ₹55–65 Lacs Annual Cloud Cost Reduction Delivered & In-Flight

This roadmap is backed by concrete execution. Over the past 12 months, Azure Synapse ran at **₹7.05 Lacs/month (~₹91 Lacs cumulative)**. By auditing workload patterns, tuning Spark compute, and executing ongoing pipeline optimizations, the run-rate is falling to **₹3.0–3.5 Lacs/month**—locking in **₹45–55 Lacs in annual recurring savings**. In addition, by auditing and halting continuously running unutilized Azure VMs, an additional **approx. ₹10 Lacs in annual recurring compute costs** has been eliminated.

Net Result: ₹55–65 Lacs annual recurring cash savings generated with 100% zero operational disruption to ERP processes or reporting SLAs.

What This Roadmap Delivers

- **Proven Bottom-Line FinOps:** ₹55–65 Lacs/year recurring savings delivered across Synapse tuning and VM shutdowns, plus upcoming Dataverse archival.
- **Next-Gen Financial Infrastructure:** Straight-through JP Morgan banking, real-time FX tracking, and AI invoice reading.
- **Zero Compliance & Audit Exposure:** Bulletproof SoD permissions, currency safeguards, and CI/CD releases.
- **Scalability:** Supporting 10× business transaction growth with automated digital efficiency.

Immediate Implementation Steps

STEP 1 **Formalize ERP as an Independent Department:** Officially establish ERP as an autonomous department spanning F&O, Statutory Compliance, Data Engineering, and BI Reporting — independent from generic IT or BI backlogs.

STEP 2 **Cross-Functional Kickoff:** Joint alignment between Finance, Treasury, and ERP engineering for JP Morgan H2H.

STEP 3 **Role Architecture Formalization:** Transition the position to **Senior Manager – ERP & Enterprise Analytics** to match enterprise scope.

Ready to Execute

The roadmap is structured, the technical architecture is validated, and the enterprise ROI is quantified.
